Summary

Software Development Engineer and MCA graduate with hands-on experience developing full-stack applications, backend APIs and AI-powered retrieval systems. Skilled in Python, FastAPI, PostgreSQL, React, TypeScript and SQL, with additional experience in operational reporting, data validation and Power BI analytics. Focused on building practical systems that digitise workflows, structure information and improve visibility for teams.

Technical Profile

- Programming & Databases: Python, Java, JavaScript, TypeScript, SQL, PostgreSQL, SQLite
- Backend & Frontend: FastAPI, REST APIs, JWT authentication, role-based access control, React, HTML, CSS
- AI & Retrieval: Retrieval-Augmented Generation (RAG), Sentence Transformers, embeddings, ChromaDB, Groq LLM
- Data & Business Intelligence: Microsoft Excel, MIS reporting, data cleaning, validation, Pandas, NumPy, Power BI
- Tools & Deployment: Git, GitHub, Visual Studio Code, Docker, Render, Streamlit

Professional Experience

Swapnopuron Welfare Society | Software Development Engineer, Kolkata, West Bengal Apr 2026 · Present

- Contributing to four NGO technology workstreams: the Interview & Assessment Platform and Education Intelligence dashboard are developed; the Student Management & Attendance System and NGO Operations & Resource Management System are in development.
- Developed and deployed the Interview & Assessment Platform with 2 core user journeys·candidate application and interviewer dashboard·using React, TypeScript, FastAPI, PostgreSQL, JWT authentication and role-based access control.
- Built an Education Intelligence dashboard using programme records covering 1,000 student profiles, 12,000 attendance records and 9,000 academic performance records across 5 branches, consolidating student, attendance and branch-level reporting.
- Dashboard analysis surfaced 81.62% average attendance, 75.26 average final score and 178 students needing attention, helping programme teams identify learner and branch indicators for review; these are descriptive dataset findings, not measured outcome improvements.
- Validated the recruitment workflow with 1 test candidate applying to an open Software Developer opportunity, confirming the candidate submission path and interviewer-side visibility.

Bhanzu | Maths and Analytics Trainer, Kolkata, West Bengal Jan 2026 · Present

- Maintain Excel-based MIS trackers by consolidating, cleaning and validating operational and learner-related records for recurring reporting.
- Prepare structured summaries and basic analysis to give the team clearer visibility into learner and operational records, supporting routine planning and operational decisions.
- Standardise spreadsheet-based tracking and data handling so recurring information is easier to review and less fragmented across manual records.

Projects

Swapnopuron Interview & Assessment Platform 2026

Technologies: React, TypeScript, FastAPI, PostgreSQL, Docker | Status: Developed | **Live** | **Demo** | **GitHub**

- Connected candidate applications and interviewer workflows through authenticated REST APIs and PostgreSQL-backed records, with JWT authentication and role-based access control.
- Validated the complete candidate journey with a test submission, demonstrating a traceable path from an open opportunity to interviewer-side application visibility.

MF Facts RAG · Facts-Only Mutual Fund Assistant 2026

Technologies: Python, Streamlit, ChromaDB, Groq, RAG | Status: Developed | **Live** | **Demo** | **GitHub**

- Built factual Q&A across 5 HDFC Mutual Fund schemes, grounding responses in official HDFC MF, SEBI and AMFI sources with source links and update dates.
- Implemented document chunking, embeddings, ChromaDB retrieval, reranking and Groq-powered responses, with guardrails against investment advice and return predictions.

Swapnopuron Education Intelligence 2026

Technologies: Python, Pandas, SQLite, SQL, Power BI | Status: Developed | **Demo** | **GitHub**

- Analysed 1,000 student profiles, 12,000 attendance records and 9,000 academic records across 5 branches; built a 3-page dashboard for executive KPIs, attendance, branch comparisons, subject performance and learning progression.
- Highlighted 81.62% average attendance, 75.26 average final score and 178 students needing attention, providing a consolidated evidence base for programme review.

Student Management & Attendance System 2026

Scope: Student profiles, attendance tracking, operational reporting | Status: In Development |

- Developing a centralised workflow for student information and attendance records to support more consistent record maintenance and easier access to participation history.
- Planned focus: structured student records, attendance tracking and recurring programme-level reporting; functionality is still under development.

NGO Operations & Resource Management System 2026

Scope: Operational activity tracking, resource records, coordination | Status: In Development |

- Developing a structured system to organise NGO operational activities and resource information in one place, supporting more consistent coordination.
- Planned focus: consolidated activity records and resource oversight to give teams clearer visibility into ongoing work and resource allocation; functionality is still under development.

Education

Meghnad Saha Institute of Technology | Master of Computer Applications (MCA) | CGPA: 7.31 2024 · 2026

Technical Highlights

- Backend Development: Built authenticated REST API workflows with FastAPI, PostgreSQL, JWT and role-based access control.
- Full-Stack Engineering: Integrated React/TypeScript interfaces with backend services and deployed application workflows on Render.
- AI & Analytics: Implemented source-grounded retrieval workflows with ChromaDB and transformed student, attendance and academic records into Power BI reporting.
